

# Millennium Force

The minimum roller coaster

# It's the best thrill

You accelerate at top speed as you plummet to earth. You'll go so fast your stomach will drop!  
And so you remember how much fun

you had we catch a picture of you on the steepest drop.

It's designed by better designers than Gallileo and Isac

Newtons brains put together. I know it sounds boring,

which it is, but its what makes it all work, GRAVITY!

Its a force which pulls us to the ground. Without it there

could only be floating and the roller coasters wouldnt exist.

1. Gravity = a force that pulls objects to the ground.
2. Air resistance = air resistance is a type of friction between air and another object.
3. Water resistance = water resistance is friction in water.
4. Friction = friction is two objects that meet and slow each other down.
5. Surface = the outside of an object.
6. Force = force is like a big push which moves an object.
7. Effect = effect is a force that makes a difference.
8. Move = move is to push an object away.
9. Potential = potential is a meaning.
10. Accelerate = accelerate is to move faster.
11. Decelerate = decelerate is to move slower.
12. Stop = stop is to slow to a complete end.
13. Change direction = change direction is to turn and go a different way.
14. Brake = brake is something to stop with or go slower.

To find thrills and dares beyond your imagination, take a polar bear dive or climb mount everest. Whatever it is you want to do this experience makes you brave and not afraid of the end the world. [Which scientists say will end any day so come today for tomorrow might not exist.]

# Where the money will go

The money will go to animal and people shelters all over the world. And give animals a happy environment to live in.
