

THE POSTER ABOUT AMERICAN POPULATION

BASIC INFORMATION ABOUT THE AMERICAN POPULATION

- Population size - 331 M in 2020
- Birth rate = 1.7
- Death rate = -24638.7
- Population growth rate = -3.5
- Halving time of the population = 20
- Life expectancy = 78.79
- Infant mortality rate 0.56

How does this graph work ?

First of all you should know that this is a **population pyramid**. It is divided into a male and a female side. They show the percent of the total population of the country by age. You can see the line on the left where it says the different ages.

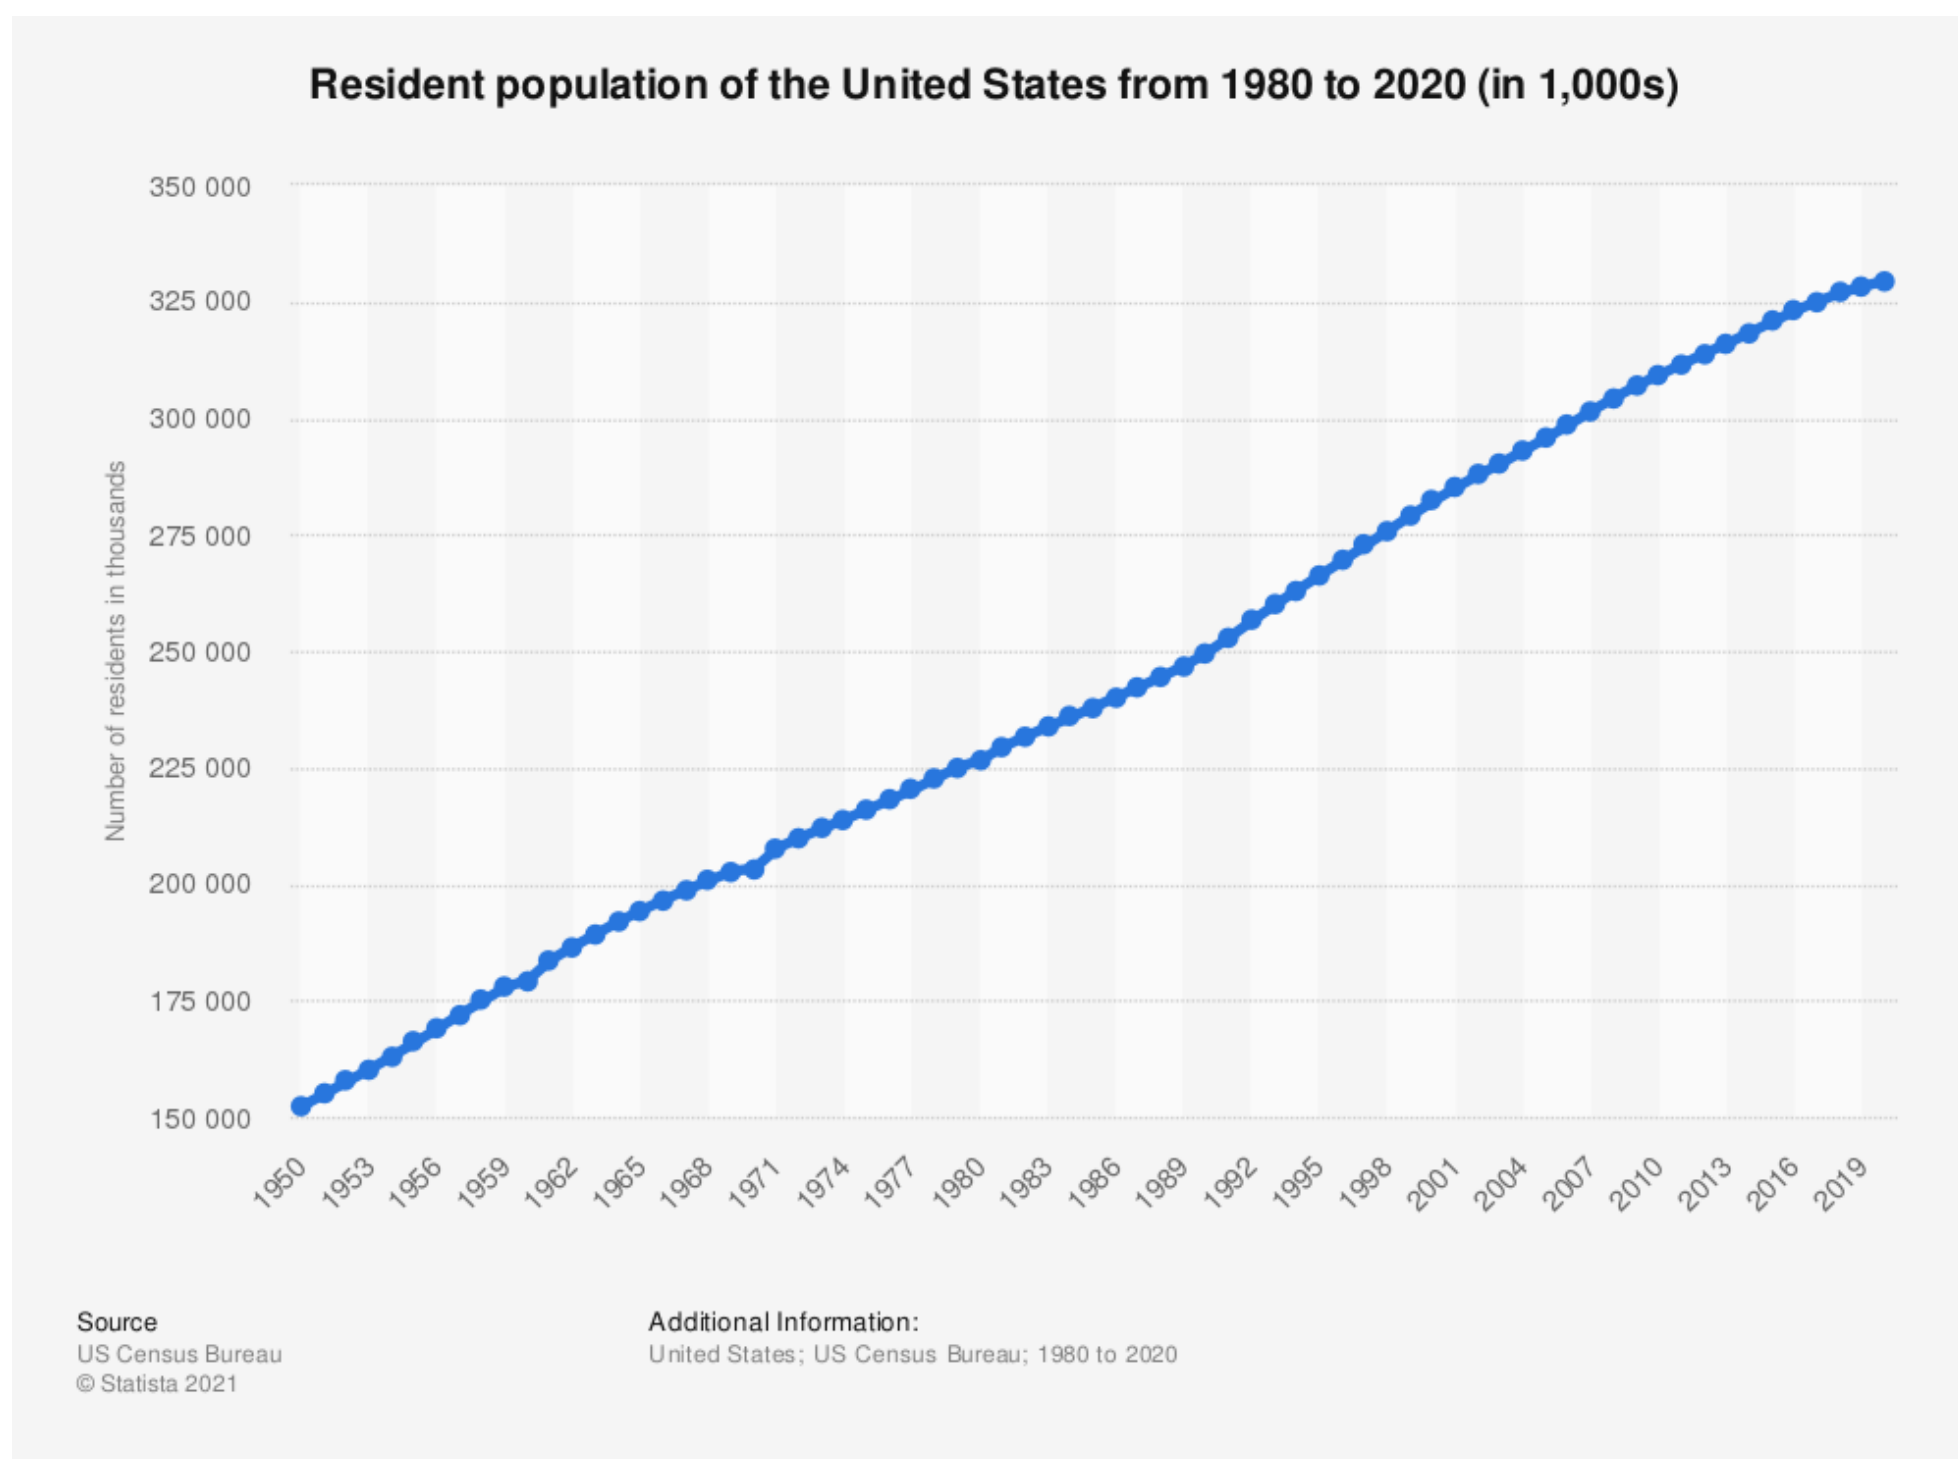

What are the reasons for the current population structure

The United States, the world's third most populated country, has about 4.5 percent of the world population. Since 1950, when population of the United States was 152.3 million, had more than doubled to 308.7 million. The population has become substantially different from what it was in 1950, instead of simply doubling in size. United States is becoming bigger, older, and more diversified, according to the Population Reference Bureau. The goal of this research is to highlight some of the demographic changes that have already happened since 1950, as well as to show how existing and future trends will transform the country in the coming decades.

The United States are growing. The mix of higher births, fewer deaths, and greater overall immigration causes population increase in the United States.

2. The United States is rapidly ageing of its population, as seen by an increasing proportion of people aged 65 and older and a rising median age.
3. The United States is rapidly ageing of its population, as seen by an increasing proportion of people aged 65 and older and a rising median age.
4. The United States Is Becoming More Racially and Ethnically Diverse, reflecting the massive effect that immigration has had on the population's size and age structure. This section considers the changing profile of the five major racial groups in the United States. Also mentioned are trends in the changing ethnic composition of the Hispanic or Latino Origin population.

Population growth graph

The issues with the population structure ?

There is a minor issue with the ageing in the country which decreases the population growth. This does not necessarily be a issue but rather a change in the structure which could stabilise the population and all it's factors.
