

Sepanta's Personal Project

MYP5/Year 11

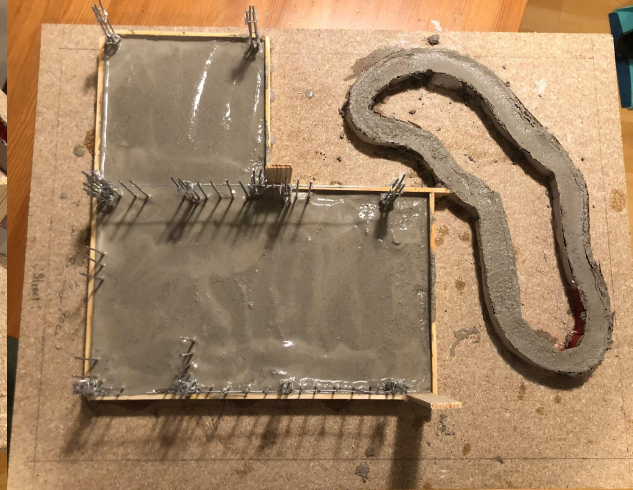

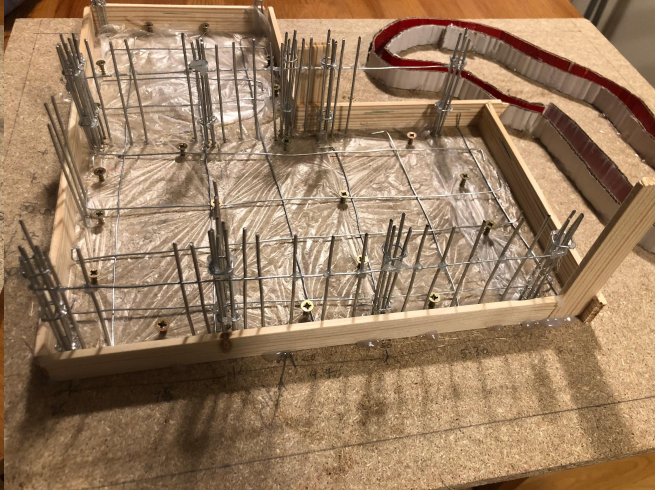

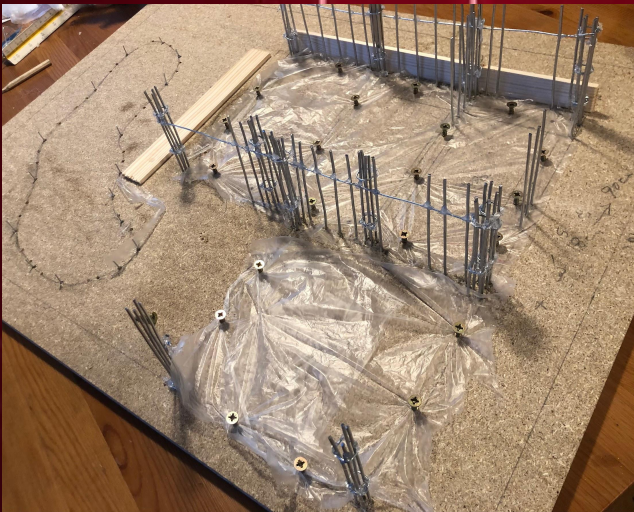

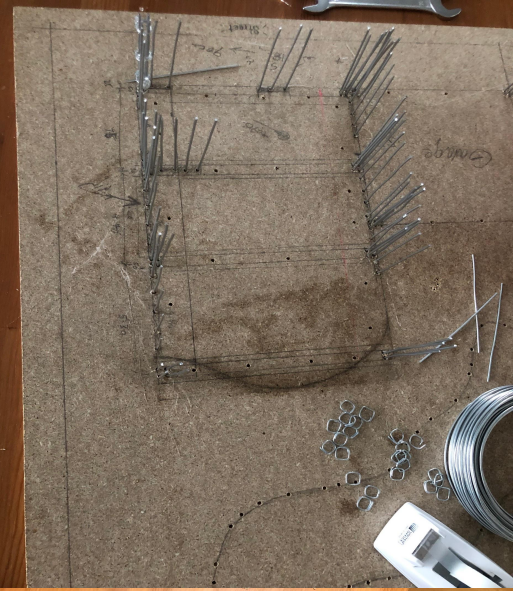

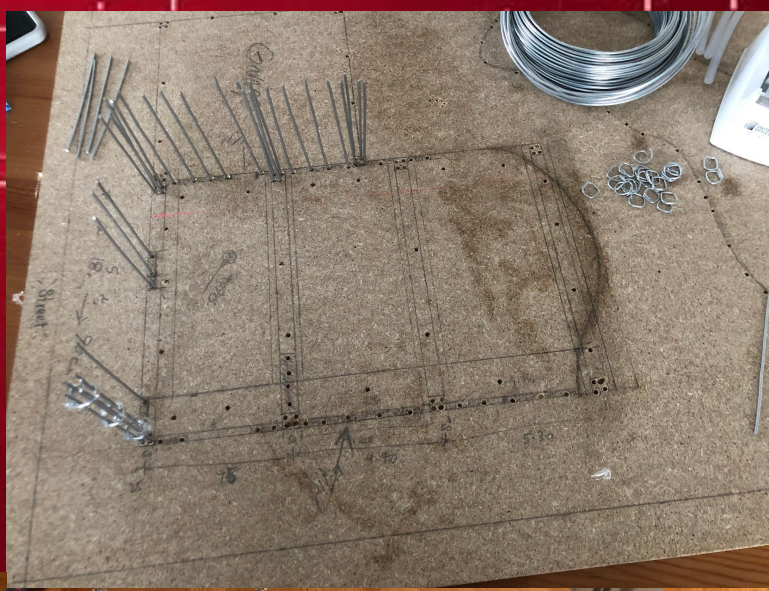

Learning goal and product goal

- Getting to know how buildings are constructed
 - Gaining new knowledge
 - Applying the knowledge gained
- Educating and inspiring others who are interested in civil engineering

My inspiration

Since I was 3 years old, I've always shown a huge interest in buildings and engineering. I would design proper blueprints of my dream house when I was 7. It's my plan to study civil engineering at university and when I'm older I'd like to do real estate development. The reason I'm tremendously passionate about buildings and engineering is that my Father is a civil engineer and does real estate development. Before I was old enough to go to school my place was always at my father's construction sites. I believe that's one of the main factors that led to my passion for buildings and engineering. When I was 8 years old, I would spend time on blueprint designing apps and designing floor plans instead of playing video games like my friends. I stopped designing floor plans when I was 12 years old because I would play Minecraft. I've made many of my ideas in my floorplans real in the game. Even though the game is not realistic it still was a really big part of my engineering life.

The process

The results

- Creation of the product
- Educating others
- Time management
- Gaining knowledge
